

Appleton Research Project

You already know you are coming to Appleton Academy in September as a Year 7, but did you know our Academy is named after a real, famous scientist?

Sir Edward Victor Appleton was born in Bradford in 1892 and went on to become a Physicist who made some really important discoveries that affect our lives today.

Our challenge to you: Find out more about our famous namesake.

Complete a project on Sir Edward Appleton.

It can be in any written form you like: a report, a story, a newspaper report, the transcript from an interview, the introduction to a book about his life.....

Your project should include information on:

- Edward Appleton and his life
- His most important scientific discoveries
- Why they are important to us today

Email your final piece of work to science@appletonacademy.co.uk and feel free to use the same email if you need any help.
