

Product Design Task:

Design a room for someone or re-design your own room in your home, it can be any room you like – bedroom, bathroom, sitting room, or even take on the challenge of designing a kitchen! Use the Ikea website to choose furniture and products to go into your room design.

You need to also create a list of all the Ikea products you have used, with their prices and quantities, to provide a total cost of your design.

First you will need to draw your design idea, then use shoe boxes or cereal boxes and paper to create a small model of your design.

BE AS WACKY and CREATIVE AS YOU LIKE WITH YOUR DESIGN!

**Bring your idea with you
for your first DT lesson in
September!**

Things to think about:

- Remember that space is important! People need to be able to move around in the room, don't want to fill your room with too much furniture.
- Colour schemes are crucial! Don't want colours to clash.
- If you are putting tall/high-up shelves or cupboards into your room design, remember to think about how someone is going to reach them? – maybe a ladder or fold out steps?
